Acetaminophen (also known as paracetamol) is used for the treatment of mild to moderate pain and fever.

Dapoxetine is a drug used to treat premature ejaculation.

Levodopa, also known as L-dopa, is a drug that is combined with other drug ingredients in anti-Parkinson's medications.

Levofloxacin is an antibiotic drug used to treat bacterial infections in adults. For some infections, its use should be limited to when no other treatments are available.

Metandienone is an anabolic steroid. There are serious health risks and consequences associated with the consumption of anabolic steroids, including aggression, high blood pressure, heart attacks, strokes, liver damage, severe acne, and masculinization in women.

Mitragynine is a compound found in an herbal product, *Mitragyna speciosa* (Kratom). *Mitragyna speciosa* (Kratom) has been linked to both narcotic and stimulant-like effects, and has potential for abuse and dependence.

Nortadalafil is an analogue of tadalafil, a drug ingredient used for the treatment of erectile dysfunction.

Phenolphthalein was previously used as a laxative, but is no longer authorized for sale in Canada because it may cause cancer. It is also a banned drug ingredient in Hong Kong.

Prasterone is a steroid hormone for vaginal insertion for the treatment of postmenopausal vulvovaginal atrophy, a medical condition characterized by the thinning and drying of the vaginal walls that may occur at menopause.

Sibutramine was previously used to treat obesity but is no longer authorized for sale in Canada because of its association with an increased risk of cardiovascular side effects such as heart attack and stroke. It is also a banned drug ingredient in Hong Kong.

Sildenafil is a drug used to treat erectile dysfunction.

Tadalafil is a drug used to treat erectile dysfunction.

Consumers are advised to stop using these products and consult their healthcare professional if they have used these products and have health concerns.
